

Why we're right for you.

Manufacturing Experience

- Leading scientific glassware manufacturer for more than 75 years
- Most glass process reactor expertise in the industry

Quality Products in Stock

- 12,000+ standard chemistry and life sciences products
- In stock and ready to ship

Superior Customer Care

- Prompt, courteous and efficient customer service
- Dedicated technical service representatives
- Technical assistance for custom and oem glass

Lab Mini Balances, 100G and 500G

- Easy-to-read, backlit LCD
- Calibration function
- Includes batteries and a snap-on, protective cover
- Compact - less than 3" wide

Accuris Mini Balances are compact, easy to use and convenient for a variety of weighing applications. With a footprint of only 2.6 x 3.9 inches, these Mini Balances offer exceptional accuracy and linearity through their full weighing ranges.

Available with either a 100g or 500g capacity, these digital balances feature an easy to read, backlit, liquid crystal display. Buttons for ON/OFF, MODE and TARE are located on the front for easy access. The software includes a calibration function for in-lab calibration with a 100g or 500g calibration weight. Calibration weights are available separately.

Portable Accuris Mini Balances are powered by 2 AAA batteries (included). After one minute sitting idle, the power automatically shuts off to conserve battery life. Ideal for lab or field use, each includes a snap on, protective cover with instructions conveniently printed on the underside. Ninety-day warranty included.

Square CLS-1815-series

Weighing Dishes, Square, Anti-Static, Polystyrene

The polystyrene weighing dishes will resist diluted acids, aqueous solutions, alcohols and bases. They are ideal for weighing, dispensing or storing both liquid and powdered samples. They afford accurate pour-outs with minimal sample loss and can also be used as quick freeze trays for sample material. Dishes will withstand temperatures up to 80°C.

Polystyrene, Anti-static, Square Weighing Dishes

Part No.	Cap. (mL)	L x W x H (mm)	Qty.	Price
CLS-1815-001	10	40 x 40 x 8	500	\$92.30 ◇
CLS-1815-002	100	78 x 78 x 25	500	\$122.30 ◇
CLS-1815-003	300	127 x 127 x 25	500	\$242.20 ◇

Pour Boat CLS-1815-series

Weighing Dishes, Pour Boat, Anti-Static, Polystyrene

Three sizes of weighing dishes have a pour spout that facilitates dispensing of powdered and liquid materials. Smooth, uniform and economical, the molded material is 20 to 30% thicker than conventional weigh dishes. Dishes can withstand temperatures up to 80°C. They can be used safely to weigh static-affected materials.

Polystyrene, Anti-static, Pour Boat, Dishes

Part No.	Cap. (mL)	L x W x H (mm)	Qty.	Price
CLS-1815-004	12	50 x 37 x 8	250	\$42.20 ◇
CLS-1815-005	140	128 x 76 x 25	250	\$86.90 ◇
CLS-1815-006	270	180 x 117 x 25	250	\$117.90 ◇

Hexagonal CLS-1815-series

Weighing Dishes, Hexagonal, Anti-Static, Polystyrene

These dishes are excellent for handling solids or liquids during weighing. Dishes are easily bent into pouring spouts that enable non-spill transfer. The molded hexagonal design provides greater balance protection and safety. Not reactive with most substances. Dishes are suitable for weighing of static affected samples. They are stackable for easy storage and accessibility. Dishes will withstand temperatures up to 80°C.

Spatulas, Spoon, #300 Stainless Steel, Non-Magnetic

Spoon end will pass through a 19/22 outer joint, while the spatula end will pass through a 14/20 outer joint. Made of non-magnetic stainless steel with a mirror finish. Spoon end is 9/16in (14.3mm) wide x 1 1/4in (32mm) long and is excellent for use in transferring crystalline material. Spatula end is 5/16in (8mm) wide x 2in (51mm) long.

Disposable SmartSpatulas®

- Inexpensive spatulas that scoop, scrape and stir
- Autoclavable for sterile applications
- Antistatic Micro for small volumes
- Unique hollow cores minimize thermal transfer
- Excellent for use as stir rod or policeman
- Resistant to dilute acids and bases
- Comply with FDA regulations for food-contact applications; made of virgin PP
- Shatter resistant for liquid nitrogen frozen samples

SmartSpatulas for laboratory sample handling and manipulation are an economic alternative to reusable spatulas. Made of virgin polypropylene, SmartSpatulas are autoclavable for sterile applications. Single-use, they help to reduce cross contamination, are resistant to dilute acids and bases. The unique hollow core minimizes thermal transfer.

SmartSpatulas comply with FDA regulations for food-contact applications, are shatter resistant for liquid nitrogen frozen samples and can also be used as stir rods or policemen.

Cell Culture Dishes, Treated, Sterile, NEST

- Made from high clarity, 100% virgin polystyrene
- Stackable for easy storage and handling
- Flat transparent surface for distortion-free observation
- Sterilized by E-beam
- Vacuum plasma tissue culture treatment
- Clear lot number for batch traceability
- Non-Pyrogenic, DNase- and RNase-free

NEST cell culture dishes are ideal for all types of culturing where microscopic observation is required. Numeric marks on the bottom of each dish allow users to identify the location of cells.

Polycarbonate, Erlenmeyer Flasks with Caps, Sterile, NEST

Nest Erlenmeyer flasks are sterile, non-pyrogenic and manufactured with polycarbonate resin. Flasks are supplied complete with either seal caps or vent filter caps for anaerobic or aerobic applications. Solid caps are also ideal for applications requiring mixing, shaking and storage of biological fluids. Graduations are molded for accuracy. Flasks are sterilized by E-beam, SAL=10. Non-pyrogenic, DNase- and RNase-free. Individually packaged in sterile bags.

High Efficiency Erlenmeyer Flasks with Baffled Bottoms, Caps, Polycarbonate, Sterile, NEST

- baffles promote optimal, consistent solution agitation when used with shakers
- USP CLASS VI, polycarbonate has a high standard of transparency
- clear graduation scales for easy observation
- sterilized by E-Beam and non-pyrogenic
- packaged in sterile bags, 4 per case

Tips

- recommended volume is 30-40% of the bottle volume
- starting speed is 75-125RPM
- set rotation speed according to the application

The imported medical-grade polycarbonate that meets with the requirements of ISO 10993 USP<661> is chosen as the raw materials, which has high transparency, great impact resistance, oxidation resistance and can withstand a high temperature of up to 121°C. The scale is clear and accurate when looked at from the outside, which facilitates the observation of the volume of culture medium. The vent cap is equipped with a 0.22µm breathable filter which is air-permeable and water-proof to efficiently prevent the passing of micro-organisms and contamination and to ensure gas exchange for good growth of cells or bacteria. The products have undergone the tightness test, drop test, high-temperature and high-voltage tests, flatness test, tensile test, endotoxin test, sterilization test, DNA/RNA enzyme-free tests and cell culture test, all the results of which meet the corresponding quality standards.

Electroporation Cuvettes

Bridge electroporation cuvettes efficiently transfer DNA and siRNA into a wide variety of cell types. While the color and shape of the caps may vary from brand to brand, all electroporation cuvettes must meet strict quality assurance specifications to ensure consistent pulse delivery and reproducible results. Bridge cuvettes meet and exceed every measurable qualification and parameter.

Universal Fit

Manufactured in the USA to tight tolerances for optimum performance, Bridge electroporation cuvettes fit in most manufacturer's systems including those from: Bio-Rad®, BTX®, Invitrogen®, Eppendorf and, Kodak®/ IBI®.

For a Variety of Applications

It is well documented that nucleic acid delivery via electroporation can achieve remarkable rates of transfer efficiency and maintain good cell viability, even for a variety of finicky human cell lines. In order to achieve the proper electrical field strength to the cells, Bridge electroporation cuvettes are carefully constructed with burr-free, specially processed electrodes and virgin polycarbonate. This results in cuvettes which provide superior results in the most discriminating applications. Available in three gap widths, 1, 2, and 4 mm, it's as simple as choosing the correct cuvette size for your application.

C-Chip Disposable Hemocytometers

- Use with general, mammal, erythrocyte and leukocyte cell counting
- Dimensions: 25 x 75 x 1.6mm
- Chamber depth: 100µm
- Chambers per chip: 2
- Tests per box: 100
- Grid: Neubauer improved

Disposable plastic hemocytometer that improves upon the conventional glass variety. The C-Chip™ offers the ability to eliminate tedious washing and reduce exposure to infectious samples and contamination. In a conventional glass hemocytometer, improper fitting of the chamber and cover slip changes the volume of the sample introduced into the chamber. The C-Chip™ all-in-one "chamber with an integrated cover" solves the problem. The C-Chip™ contains two precision engineered 100 µm height counting chambers that do not need cover slips. Just pipette 10µl of sample into each chamber, place on the microscope and you are ready to count. Then dispose once finished. It's that simple.

Packaged 50 slides (2 tests per slide) per box, individually sealed with a lot certificate in every box.

C-Chip Disposable Hemocytometers

Glass Bottom Cell Culture Dishes and Plates

Dishes and plates used in confocal, differential interference contrast, polarized light and phase contrast microscope for cell observation.

Culture dishes are ideal for live cell observation. Complete with medical grade adhesive to guarantee non-cytotoxicity. They are also ideal for live cell microscopy and live cell imaging. Optical grade glass thickness is 0.16-0.19mm.

Glass Bottom Cell Culture Dishes - Sterilized by E-beam Sterilization

Non-cytotoxic, non-pyrogenic and sterile.

Culture plates for high-resolution microscopic images of cultures growing in standard size 6- and 24-well disposable plastic cell culture plates. Made using high volume, automation to ensure lot-to-lot reproducibility and cost effective pricing. The first step is to precisely cut an opening in the center of the culture well plates. A clinically non-toxic adhesive is used to attach a high quality technical grade glass cover slip of standard thickness (0.13-0.16mm) to the bottom of each well. Cover slips are borosilicate glass of the highest hydrolytic consistency and are well adapted for a broad variety of applications.

Cell Culture Plates, Non-Treated, Sterile, NEST

- Made from high clarity, 100% virgin polystyrene and sterilized by E-beam
- Premium packaging; individually wrapped in peel-able HDPE films and blisters
- Non-Pyrogenic, DNase- and RNase-free

Nest cell culture plates have round edges for better handling. Low profile, low-evaporation lid design assures uniform growth. Small feet on the bottom corners of each plate eliminate scraping of the microscope lens. Nontreated growth surface is more hydrophobic than tissue culture surface and is similar to the surface of a bacteriological Petri dish. Come with clear lot numbers for batch traceability.

Tubes, Bio-Reaction, Centrifuge, 50mL, Sterile, NEST

- USP Class VI polypropylene tubes with HDPE caps
- Packaged in sterile, zip-sealable bags
- Non-pyrogenic, non-cytotoxic, DNase- and RNase-free, human DNA-free

Bio-reaction tubes offer a convenient and economical option for suspension cell culture. Bio-reaction tubes include vent caps for gas exchange; 0.22µm hydrophobic membranes are welded in. These tubes provide an environment perfect for small scale suspension culture or biological reaction experiments that require aseptic conditions with free gas exchange. Bio-reaction tubes are extremely useful in the screening and optimization processes of suspension cells. Reaction parameters can be optimized with small amounts of material which can maximize the number of parallel experiments that can be done.

CLS-1905-01	1	\$485.30 *

Electrophoresis Gel Band Cutters, Disposable, FASTGENE

Disposable gel band cutters provide an easy, affordable way to excise DNA bands with both consistency and accuracy. They simplify fragment purification and eliminate wasted effort associated with knives and razor blades. The size of excised gel bands will always be 6 mm x 3 mm, and multiple bands can be collected in a single cutter; large scale purifications become that much easier. Band weight depends on agarose percentage and thickness; please see the table below.

Agarose Gel Band Cutter, Disposable

Part No.	Qty.	Price

Midori Green Nucleic Acid Staining Solution

- Non-toxic, non-mutagenic, and non-carcinogenic
- Excitation: 270 nm and 290 nm (fluorescence) 490nm (visible)
- Emission: 530 nm (fluorescence)
- Compatible with UV transilluminator and blue LED transilluminator
- Can be stored at room temperature, protected from light

Midori green nucleic acid staining solution is a new and safe alternative to the traditional ethidium bromide (EtBr) stain for detecting dsDNA, ssDNA and RNA in agarose gels. **Midori green is just as sensitive as EtBr** and the staining protocol is also very similar. Midori green binds less aggressively to the DNA molecules, so fewer mutations occur during synthesis. Compared to EtBr, which is known as a strong mutagen, midori green causes much fewer mutations in the Ames test. Most importantly, it is not considered hazardous waste, can be disposed of according to standard laboratories procedures, and is stable for years.

Agarose LE, Organic, Solvent-Free

- Multi-purpose, high purity
- Enhanced resolution and clarity
- Reduced background
- Low EEO / increased electrophoretic mobility
- RNase-, DNase- and protease-free
- High hysteresis / improved thermal stability

Agarose LE is a highly purified agarose, used for nucleic acid electrophoresis (analytical and preparative), protein electrophoresis (including radial immunodiffusion) and various blotting protocols. It's refined using a process that excludes organic solvents, yielding a cleaner end-product with a significantly reduced environmental impact. Agarose LE can be used for analyses of proteins and nucleic acids of various sizes (150bp to 6kbp).

Its low EEO (Less than or equal to 0.13mr) promotes increased electrophoretic mobility, yielding improved resolution and shorter run times. This also allows macromolecules and larger particles (subcellular fragments, viruses, etc.) to migrate more freely through the gel matrix. The consistently low EEO also provides a reduction in band distortion (caused by counter flow) that can result from the presence of excessive sulfate-rich negative ions.

Benchmark Agarose LE is easily soluble and free of nucleases. It is highly transparent (forms a clear, colorless solution at 1g: 100mL H₂O), and exhibits exceptionally low absorption of chemical staining agents. Pore size can be adjusted by simple modifications to the concentration ratio.

Formulated for high gel strength and integrity, Agarose LE exhibits exceptional thermal stability and mechanical resistance, ensuring safe, easy handling, regardless of whether a denaturing agent has been added.

BioClave™ Benchtop Autoclaves in Three Sizes

- Fully automatic
- Built-in water tank - no external water required

Despite their space-saving exterior dimensions, BioClave stainless steel sterilization chambers are surprisingly large. They can accommodate a variety of liquids, media, instruments, glassware, plasticware and other common laboratory items.

BioClaves include mechanical and electrical safety interlocks that prevent doors from being opened until the pressure has reached zero PSI.

With large digital displays and fully automatic operation, all segments of the sterilization cycle (fill, sterilize, exhaust and dry) commence and run to completion by simply pressing the start button. All BioClaves offer three cycle options (standard programs), which are preset for the sterilization of liquids, wrapped instruments or unwrapped instruments / plasticware. A “Dry Only” option is also available for additional drying time to be added to the end of a cycle. For special applications, requiring variations in cycle parameters, the cycle times are fully adjustable. A built-in USB port allows for transfer / storage of cycle data.

An optional thermal mini-printer is also available for providing a record of sterilization parameters.

The **NEW BioClave 28** features an increased chamber size with a diameter of 12.6 inches (32cm), making it capable of sterilizing 1 and 2 liter flasks and bottles.

Benchtop Autoclaves are CE approved.

CLS-1610-100

Compact High Speed Microcentrifuge, 16,000 xG

The MC-12 is the first and only compact microcentrifuge capable of achieving centrifugal speeds up to the critical threshold of 16,000 xG, often held as the standard for many molecular biology / DNA protocols. Its brushless, maintenance free drive system makes it powerful, yet compact enough to allow each work station to be fully equipped with a personal centrifuge.

MC-12 defines a new class of microcentrifuge: compact, quick, powerful and affordable. All aspects of microcentrifuge performance were taken into consideration and no compromises were made. In addition to its unsurpassed speed, the MC-12 also delivers shortened acceleration / deceleration times, whisper quiet operation. Its computer-designed airflow pattern minimizes sample temperature increases during longer runs at high speeds.

All operating parameters are set using a single, conveniently located control knob and the large, bright LCD provides a clear indication of time and rpm or g-force. A separate momentary spin button permits instant spin downs, without setting or disturbing any preset parameters. The aircraft grade aluminum rotor accepts 1.5 to 2.0mL tubes directly, as well as 0.5 and 0.2mL tubes with optional adapters. Cold room safe for applications requiring sub-ambient temperatures.

Compact High Speed Microcentrifuge

MC-24 Touch, High Speed, Microcentrifuge

- Full Color Touch Screen and mySpin™ 1-button program recall
- Includes 24-place Combi-Rotor™ for tubes and strips
- Compact design, 9 x 12 x 7.75 inches
- Unique air-flow, keeps samples cool

In addition to the next generation, touch screen, control panel, the MC-24 offers high speeds (up to 13,500 rpm / 16,800 xG) and a unique COMBI-Rotor™ that accepts both standard microtubes (1.5 / 2.0mL) and PCR tubes / strips (0.2mL).

Large, touch screen shows actual speed (in rpm or rcf) along with set and remaining time. Up to nine speed / time profiles can be stored in memory and the home screen displays a “mySpin” icon for instant recalls of favorite profiles.

Supplied with Benchmark’s unique COMBI-Rotor™, the MC-24 Touch will accept 24 x 1.5 / 2.0mL tubes and two strips of 0.2mL tubes (16 x 0.2mL) without requiring separate adapters. Samples are kept cool, even during extended runs at the maximum speed setting by a proprietary air flow system that moves air evenly and quietly throughout the chamber.

The MC-24 Touch is cold room safe and carries a two-year warranty.

Intuitive Control Panel

Microprocessor Control

- Over-speed protection
- Program storage
- Pre-cool function on refrigerated model
- Momentary spin button
- Imbalance detection
- Adjustable acceleration and deceleration
- Audible end-of-run alarm

HERMLE Compact Microcentrifuges

- Speed up to 15,000rpm
- G-Force up to 21,379 x G
- Maintenance-free induction drive
- Motor driven safety lid lock
- Quiet operation: less than 60 decibels
- Splash-proof display

Refrigerated model
also available!

Compact, quiet and powerful are just a few words that describe these HERMLE microcentrifuges. Plus, the versatility of eight available rotor options and the result is the ideal microcentrifuge for the modern molecular biology laboratory.

All common microtubes (0.2, 0.5, 1.5, & 2.0mL) can be used as well as PCR strips, hematocrit tubes and even 5.0mL centrifuge tubes. Advanced microprocessor controls allow for setting / displaying of the rotational speed in either rpm or rcf. In addition to retrieving saved programs, the easy to use front panel can adjust acceleration / deceleration rates, and change the end of run alarm tone.

Despite a remarkably small footprint, they offer a uniquely designed 44 x 1.5mL dual row rotor, nearly doubling the capacity when compared to traditional micro centrifuges.

The refrigerated model offers a powerful, compressor-driven cooling system that maintains temperatures as low as -20°C and is designed to reach 4°C (from room temperature) in less than ten minutes.

Mini Centrifuges

- Quiet, vibration-free operation
- Include two, easy-to-change rotors

These mini centrifuges are popular for quick spins, microfiltration of samples, and cell separations. The covers are made of high strength plastic and provide easy viewing of samples. These centrifuges quickly accelerate to their maximum speed and stop within seconds. Manufactured to precise specifications, resulting in smooth runs that are quiet and vibration-free. Included is a round rotor with capacity for six standard microtubes (1.5 to 2.0mL) as well as a strip tube rotor for 2 x 8 PCR strips or sixteen individual 0.2mL tubes. The rotors can be easily interchanged by the user within a matter of seconds. Other RPMs are available, please contact us for details.

BeadBath Duo™

Designed for precision temperature control with either water or Lab Armor® beads.

All the advantages of a “Bead Bath”

- eliminates constant refills (burn-out protection)
- easy, accessory-free securing of tubes & bottles
- allows angled incubations
- designed to be left on constantly

BeadBath Duo - Accurate, Uniform Temperature Control with Separate Modes for Beads or Water

Unlike any other laboratory bath, they feature a “MODE” button that can be used to toggle between “Bead” or “Water” mode. Choosing the correct mode will regulate the internal heating system, automatically adjusting the operation and balance of the multiple internal heating elements to ensure optimal performance. The result is one combination bath that is suitable for accurate and uniform temperature control in either condition.

While the majority of research laboratories today are using water baths, many prefer the convenience of bead baths. The BeadBath Duo™ provides the best of both worlds, allowing conversion from one bath type to the other, with the simple press of a button. Quick-Cal™, simple in-lab calibration function.

BeadBath Duo

Part No.	Cap. (L)	Lids	Price
CLS-4599-001	2	Lift-Off Lid	\$847.95 *
CLS-4599-002	10	Hinged Lid	\$1,446.05 *

Lab Armor™ Beads extend the life of your bath by eliminating corrosion and reducing burn-out risk.

Lab Armor Beads Replace Water and Ice in Baths, Blocks and Buckets

Dry metallic beads replace water and ice in baths, blocks, and buckets while maintaining temperatures of -20°C to 8°C for 4 or more hours. Open sources of water can put labs at risk of incubating and spreading biological or chemical contamination between samples, equipment and people. Unknown contamination in water can readily enter your incubating samples, resulting in distorted data and non-reproducible results. Lab Armor™ bead technology can save you countless hours of reworking ruined experiments and eliminate cleaning.

For best performance, use product at an operating temperature of -80 to 180°C. However, product may be used up to 300°C without loss in thermal performance, but product fluidity may be reduced. Please contact technical services for specific recommendations.

Reduce Repetitive Strain

CLS-4889-V01

Vortex Mixer with Infrared Sensor

Advanced infrared sensor vortex mixer with an adjustable mixing speed and two operation modes: sensor or continuous. The revolutionary IR sensor mode, an infrared system, detects the presence of the test tube and the vortex mixer automatically starts vibrating! No press, no stress and no pressure required to maintain vibration. The technopolymer structure ensures chemical resistance. The ergonomic and highly innovative design along with the zinc base ensure excellent stability on the bench.

CG-2000-V10

Digital Magnetic Stirrer with Timer, Low Profile, VELP

Reliable and Precise

- On board timer for unattended operation
- Auto reverse of the stirring direction to ensure better mixing
- SpeedServo™ technology maintains stirring speed during viscosity changes

Robust Structure and Compact Design

- Equipped with a brushless motor
- Technopolymer case guarantees high resistance to chemicals
- White surface for easy visualization of particles and color changes

The MST is a compact, low profile, digital stirrer with a **manually adjustable speed range of 80-1500 RPM**. The bright, digital display allows for very accurate setting of the stirring speed which is adjustable in 10 rpm increments. SpeedServo™ technology provides for constant stirring speeds even during viscosity changes.

Bottle Top, Vacuum Filter Systems with Molded Graduations

- High flow rates and throughput
- Low protein binding low chemical extractable
- Non-pyrogenic and surfactant-free
- 0.22µm membrane PES
- Molded clear graduation on both filter tops and receiving bottles
- 45 mm bottle tops fit most 45 mm neck plastic and glass media storage bottles
- Easy grip style receiving bottles can also be used as storage bottles
- Maximum bottle volume is greater than filter tops, eliminating overflow

Disposable filter systems are useful for large volume sample separation and sterilization for tissue culture media and other biological buffers. PES membrane filters with graduated filter tops made with polystyrene, and polyethylene necks with polystyrene receiving bottles. A separate sterile polyethylene cap is included.

Vacuum Filtration Pump, Oil-Free

Compact vacuum filtration pumps designed for sample preparation in chemistry, microbiology, waste water control and other analytical processes. Diaphragm pumps offer a compact, high performance and easy-to-use solution which is perfect for both single and multiple filtrations. The functional, space-saving and innovative design with readily accessible, top-mounted power switch ensures convenient and quick operation.

Corrosion Resistant Design

Both models feature robust PTFE diaphragms and valves for excellent corrosion resistance in routine biology and chemistry lab applications. The CLS-4880-01 has an aluminum head and is well suited for aqueous and some organic solvents. The -03 incorporates a PTFE head to provide a full fluoropolymer flow path for maximum chemical resistance in the most challenging applications.

Quiet & Reliable

These pumps offer whisper-quiet operation, low vibration, and long service intervals: 10,000-15,000 operating hours in most applications.

Ultimate Vacuum: 75 Torr (100mbar) **Free Air Capacity:** 14 lpm (0.5cfm)

Sterile Syringe Filters, NEST

NEST high quality syringe filters are individually wrapped and sterile. The standard range of filters are available in PVDF (polyvinylidene fluoride) and PES (polyethersulfone)

All filters are designed with Female Luer-Lock inlets and Male Luer-Slip outlets. Sterilized, non-pyrogenic and RNA- and DNA-free. The syringe filter housings are polypropylene.

PVDF – Extremely low protein-binding for filtration of non-aggressive aqueous and mild organic solutions or where maximizing protein recovery is important.

- gas filtration
- vapor filtration
- high temperature filtration

PES – Low affinity for proteins and extractables with substantially faster flow rates than PVDF; suitable for pre-filtration and filtration of buffers and culture media.

- sterile filtering protein solution
- tissue culture media filtration
- tissue culture additive filtration

GlucCell® Glucose Monitoring System

GlucCell® Glucose Monitoring System speeds and simplifies your glucose measurement during cell culture. GlucCell® Glucose Monitoring System is specially designed for measuring the glucose metabolites during animal cell culture, unlike general diabetes glucose meters on the market that are not applicable for animal cell culture. This package contains a portable, palm size glucose meter and pre-calibrated, disposable test strips, designed for measuring the glucose concentration during mammalian cell and insect cell culture. GlucCell® Glucose Monitoring System is intended for use by laboratory researchers or bioreactor professionals to obtain a quantitative measurement of glucose in cell culture media. It is made to meet your needs with calibration-free, maintenance-free, high accuracy, instant, disposable and portable.

Test strips have a 2 year shelf life and are good for 90 days once opened. Store the test strips vial at room temperature within the temperature range of 10°C to 40°C (50°F to 104°F).

Hinged, FlipTop™, Cardboard Freezer Boxes

- Attached Hinged Lids - Fool-Proof Identification
- 5-1/4 x 5-1/4 x 2 Inches - Standard Size, for Existing Rack
- Available in 6 colors, White, Blue, Green, Orange, Purple and Red - Individual or Assorted Packs
- For 81 or 100 Tubes - 9 x 9 or 10 x 10 Format
- Alpha-Numeric Coding - Top, Sides and Bottom

FlipTop™ hinged lid boxes are made of recyclable cardboard, with a liquid resistant outer coating. They are shipped fully assembled with 81 place or 100 place cardboard dividers. Each box has drain slots on the bottom surface and numbered grid markings in almost every conceivable location (top, bottom, sides, etc.). Assorted packs include one of each red, blue, green, orange and purple.

Cardboard Freezer Boxes with Dividers

- Durable and treated to resist moisture
- Use in temperatures down to -196°C

Durable storage boxes made of cardboard treated with a moisture-repellent to protect from the effects of liquid nitrogen and condensation from freezer equipment. Boxes can withstand temperatures as low as -196°C. Small drain holes in the bottom corners allow drainage of excess moisture. Designed to be compatible with most standard upright rack systems. Available white or yellow and in a variety of sizes / configurations to best match your needs.

Upright Style Freezer Racks for Two-inch Boxes

For -20° to -80° Freezers

Upright freezer drawer racks are for standard two-inch, cardboard, plastic (polycarbonate) or metal (stainless steel or aluminum) boxes. High quality upright freezer racks are constructed of corrosion resistant stainless steel, including handles and identification card holders. Racks offer a more organized system for storage and retrieval of samples. They facilitate both access to and storage of samples without having to remove the whole rack from the freezer.

Liner for Laboratory Benchtops, Floors and Carts

- Economically absorbs and retains spills
- Soft, durable and easily cut to size

Absorbent liner keeps spills from spreading and protects benchtops, floors and carts. Cushions surfaces while absorbing liquids. Made of highly absorbent three-ply tissue with a waterproof polypropylene backing that is resistant to most chemicals.

High Performance Ice Buckets with Lids

- Expanded urethane laboratory ice buckets are lightweight, durable and non-sweating
- Able to withstand a wide temperature range: -196°C (-320°F) to 100°C (212°F)
- Impervious to moisture and odors
- Features convenient pour spout, drip-proof rims and fill line indicator
- Includes snug-fitting lid that stores neatly under base when not in use
- Lightly textured non-slip finish and raised edge provides secure transport
- Available in 2.5L and 4.0L sizes, each in four colors; blue, black, red and green

Superior insulating properties combined with high chemical resistance make these ice buckets compatible not only with wet ice, but also with ultra-low temperature materials including dry ice, salt slurries, dry ice methanol slurries, or liquid nitrogen.

LABeler™ Handheld Laboratory Printer

CG-4034-10

- Lightweight, handheld operation
- Variety of label tapes for many tube sizes
- Built-in cutter – no need for scissors
- Prints a variety of barcodes
- “Ultra-Low” tape for liquid nitrogen storage

Proper identification of scientific samples is often a key objective of the research laboratory. The process of writing on sample tubes and containers can be messy and unreliable. It can also be difficult to find the time to access a computer and design a layout for expensive ink jet labels. The LABeler™ Lab Printer provides the convenience of a lab pen with the benefits of a large desktop printer. Simply type in the desired copy using the 50+ button key pad and press the print key... within seconds your label can be cut by pressing the cut lever and is then ready for application.

With over 15 available sizes, colors & material combinations, the LABeler™ is ideal for label identification of any laboratory vessel for nearly any laboratory application. Standard label tapes can be autoclaved, boiled or even frozen to temperatures as low as -50°C. Special Ultra-Low label tapes are also available for storage in -80°C environments or for liquid nitrogen applications. Includes one, 12mm wide white tape with black print (CG-4034-20).

NOTE: Printer requires six AA batteries. They must be purchased separately.

Tapes available in a variety of sizes and colors.

Sealing Films, SEALPLATE®

- Functional temperature range from -40° to +120°C
- Available sterile or non-sterile

SealPlate 50µm thickness polyester sealing films minimize evaporation, prevent spillage and contamination between wells, and provide a secure seal, not just a cover. Secure sealing of all wells eliminates “edge effects” in sensitive ELISA assays. SealPlate sealing films can also be used with tissue culture plates for short-term storage, incubation and containment of biohazards. SealPlate sealing films are non-pierceable. Each SealPlate sealing film measures 79.4 x 146.1mm.

Sealing Films

Part No.	Description	Qty.	Price

SealPlate Sealing Films

Use the accessory plate roller to assure a secure and uniform seal around all wells.

Sealing Films for Real Time PCR, THERMALSEAL RT™

- “Brilliant” ultra-high optical clarity
- Heat resistant; recommended for temperatures from -40° to +120°C
- Certified DNase-, RNase- and nucleic-acid-free

ThermalSeal RT 50µm thick sealing films combine optically transparent polyester sealing film with a strong, ultra-smooth, non-absorbing, non-fluorescing, **medical-grade adhesive for superior performance in real-time PCR applications**. In place of the customary paper backing, ThermalSeal RT sealing films have a plastic liner which is easily removed before use and contributes smoothness and extreme optical clarity to the adhesive. Dimensions are 79.4 x 142.9mm for sealing PCR plates. Length between the perforations with end tabs removed is 121.9mm.

Completing application of sealing films by pressing with the accessory plate roller assures a secure, uniform seal around all wells.

ThermalSeal A

Completing application of sealing films by pressing with accessory film-sealing paddle assures a secure, uniform seal around all the wells. The paddle fits within the edge of raised-rim plates.

ThermalSeal RTS

Sealing Films for Classic PCR, THERMALSEAL A™

- Stronger and thicker 50µm adhesive layer for a secure seal
- Heat resistant; recommended temperatures from -40°C to +125°C
- Can be used with raised-rim PCR plates and standard plates
- Two end tabs which are perforated for easy removal
- Certified DNase-, RNase- and nucleic-acid-free

ThermalSeal A sealing films are an advanced version of classic ThermalSeal sealing films for PCR. ThermalSeal A films consist of 50µm thick clear polypropylene with a thicker 50µm layer of a stronger adhesive formulated for improved protection against evaporation and leakage during thermal cycling.

Intended for non-realtime PCR applications. Dimensionally cut for a universal fit yields a secure seal for both raised-rim and flat top PCR plates. Two end tabs allow for easy positioning of the film on the plate but are perforated for easy removal. Dimensions with end tabs are 135.5 x 77.8mm; length without end tabs is 118.1mm with 45° corners. Each package includes one film sealing paddle that also works with raised-rim plates.

Sealing Films for Classic PCR

Part No.	Description	Qty.	Price

CLS-4001-00P	Film Sealing Paddle Only	5	\$8.55 ◇

Sealing Films for QPCR, Storage & Crystallization, THERMALSEAL RTS™

- Optically clear with minimal auto-fluorescence
- Chemically inert; no extractables except at extreme pH
- DMSO-resistant for HTS and Certified Dnase-, RNase- and nucleic-acid-free
- Heat resistant; recommended for temperatures from -70° to +100°C
- Fit within raised plate rim to prevent loss of seal due to film lifting
- Silicone adhesive forms the strongest available seal for evaporation prevention
- Non-tacky adhesive layer simplifies handling of film prior to sealing

ThermalSeal RTS sealing films are 50µm polyolefin films with 50µm inert encapsulated silicone adhesive. **Especially suited for real-time qPCR, storage and protein crystallization applications.** The encapsulated silicone adhesive is non-tacky until pressed against the sealing surface, at which time adhesive is released only in sealing areas to form the strongest available heat-resistant seal around each well. Adhesive on non-sealing areas of the film, such as directly over sample wells, remains encapsulated and inert. ThermalSeal RTS films are sized to fit within the edges of raised-rim 96-well plates. Consistent high optical clarity makes possible reproducible, reliable, and consistent DNA amplification measurements and crystal detection. Two end tabs assist in positioning films on plates. Easy removal of the end tabs at perforated boundaries prevents lifting and higher evaporation rates that can occur with films that overlap the plate rim. Dimensions: 76.2 x 133.4mm, length with end tabs removed is 113.0mm.

The patented Heathrow eCount is a simple to use colony counter for counting cells in microbiology applications or tissue culture. This unit combines a multifunction electronic counter with a black Sharpie® pen for counting and marking to prevent missing or double-counting colonies in a Petri dish.

Safety Spill Trays Help Contain Spills and Aid in Cleanup

- Acid-resistant safety spill trays
- Easy-to-clean covered corners (unless otherwise noted)
- Great for trays, drawers and shelf liners

Constructed of chemical-resistant 3/16" thick virgin polyethylene except for CG-1988-02 and CG-1988-03, which are welded polypropylene. Trays are designed to safely contain accidental spills. Unless otherwise noted, they are rotationally molded, one-piece design with smooth, covered corners; no welded joints that can leak, break off or trap contaminants.

Economy Fluid Aspirator System

- Built-in pump quickly aspirates fluids while maintaining a low noise level (76db at 1 meter) and minimal vibration
- Chemical and corrosion resistant polypropylene collection bottle holds 3800mL (1 gallon) of fluid wastes and has a safety release vent to prevent vacuum implosion
- A replaceable hydrophobic filter seals itself if it becomes wet, protecting the pump motor from fluid contamination

Perform vacuum aspiration of a variety of liquids, including tissue culture media, supernatants and chemical wastes. Compact design will not crowd workspace. To use, simply insert a pipette tip, Pasteur pipette, or serological pipette into the collection tube and plug in to a 110 / 120V outlet. Self-contained system with bottle, tubing and vacuum pump is lightweight, compact and easy to use.

Part No.	Cap. (mL)	Bottle	Qty.	Price

Ideal for fluid collection in tissue and / or cell culture

CLS-910-100

BVC Fluid Aspirator Systems for Cell Culture

- Reliable VACUUBRAND vacuum pump used and proven in chemistry
- Suitable for two users with optional extension and hand controller
- 0.2 micron bio-filter helps protect pump and lab atmosphere
- Professional models have contact-free, external level sensors

Aspirator systems that accommodate your decontamination protocol whether you autoclave or disinfect in the bottle.

Basic Models are unpowered aspirator systems, suitable for use with in-house vacuum systems. A mechanical regulator provides a suitable vacuum level in the bottle for aspiration, and disconnects it from the supply when that level is reached- no power required. This reduces demand on the vacuum supply, increasing efficiency while reducing noise and impact on other applications. Unit is shipped ready for use and is supplied with a stable and easy-to-clean, powder-coated metal stand, 0.2um bio-filter, and hand controller.

Control Models feature a powerful, whisper-quiet Vacuubrand vacuum pump, eliminating the need for a central vacuum supply. When using the hand controller, the pump is turned on and off automatically. Suction power is electronically adjustable via the easy-clean touch panel.

Professional Models include an external liquid level sensor that does not contact the contents of the bottle, allowing you to work without worrying about overflow. A special disinfection program allows the aspiration of disinfectant after the system is shut down to decontaminate the hand control. The 4 liter polypropylene bottle version is supplied with quick connectors as standard; the 2 liter glass bottle version is supplied with barbed connections.

Disposable Reagent Reservoirs

Reservoirs designed for use in multichannel pipetting applications. Accommodate all types of pipettors up to 12-channel width. Feature a trough design, graduation marks on interior walls, and pour-off spouts on each corner. All sterile reservoirs are lot-certified, nonpyrogenic, and DNase- and RNase-free.

25mL reservoirs are available in a divided format that has either two or three distinct mini reservoir chambers. Two channel reservoirs have 5 and 10mL capacities. Three channel one has 5mL capacity each. All sizes made from virgin modified polystyrene. Available non-sterile or electron beam sterilized.

5mL Reagent Reservoirs for 8-Channel Pipettes, Sterile

Our new ASPIR-8™ is the ideal reservoir for any lab utilizing 8-channel pipettes. The strict inner dimensions are designed specifically for 8 channels, thus conserving space and reagent over its longer 12-channel counterparts. This thinner design minimizes reagent exposure and usage. ASPIR-8™ is the only reservoir that is tailor-made for your 8-channel instrument.

Sterile Pipette Tips 1000 and 1250 μ L with Aerosol Barrier Filters

- Certified RNase, DNase, Human DNA, Pyrogen-Free
- Low-Retention, Fine-Point design for lowest sample adhesion
- Ultra-Clear polymer withstands organic solvents and provides clear, error-free pipetting
- Effective hydrophobic aerosol barrier eliminates carry-over and pipettor contamination
- Gamma-irradiated Sterile and Graduated
- Universal-fit for most single and multichannel pipettors

NEST Aerosol Filter Pipet Tips are designed and manufactured using premium-grade 100% polypropylene for the most critical molecular biology liquid handling applications. All Nest Aerosol Filter Tips are gamma irradiated Sterile and Certified RNase/DNase-Free, human DNA-Free, and Pyrogen-Free. In addition, Nest Aerosol Filter Tips are Ultra-Clear with a Fine-Point design for the convenient, precise pipetting of precious nucleic acid and protein samples and are designed to be Universal-fit for the majority of research-grade pipettors.

Transferpette® S Single Channel, Fixed Volume Pipettes, BRAND®

Transferpette S Single Channel pipettes are supplied with performance certificate, operating manual, shelf mount, and three-year warranty.

- Slim hand grip — Provides a comfortable and secure fit in any hand
- One-handed operation — Perform all functions (set volume, pipette, tip ejection) without changing your grip
- Volume-change protection — Simple to operate and clearly shows when the volume setting is locked
- Slim shaft — Narrow tubes? With the slim shaft, easily pipette into narrow tubes such as 15 mL conical tubes
- Easy cleaning — The shaft tucks inside the handgrip for smooth surfaces, making cleaning easier
- Low forces — Short pipetting stroke, easy mounting and tip ejection make pipetting a breeze
- Universal tip cone fits tips from most quality manufacturers
- Completely autoclavable at 121 °C
- Color-coded pipette accents make pipette and tip selection easy

All BRAND® pipette tips are produced using the most advanced cleanroom techniques to ensure consistently high quality. The tips are manufactured in an environmentally friendly manner using only high-purity polypropylene, free from oleamide and diHEMA - additives which can interfere with biological tests. Available non-sterile or BIO-CERT® sterile in a variety of packaging options. Tip volumes range from 0.1µL to 10mL.

BRAND pipette and filter tips are tested and designed to fit BRAND pipettes and most of the pipettes from GILSON®, Thermo Fisher Scientific FINNPIPETTE®, Eppendorf® and BIOHIT® / Sartorius®. The 5mL tip is exclusively tested for BRAND pipettes and Thermo Fisher Scientific FINNPIPETTE®. The 10mL tip is suitable for BRAND and Eppendorf® pipettes.

CAPP® Tempo Pipette Controllers

- **Digital Display:** Shows battery status and aspiration / dispensing speed. Flashes when battery is low and turns off after 20 seconds of non-use.
- **Powerful Motor:** 0 to 25mLs in under 12 seconds. Six different speed settings.
- **EBS – Electronic Break System:** Maximizes speed and precision. Pipette maximum speed and press the EBS to slow down at the last second. Press EBS a second time to return to maximum speed.
- **Aspiration and Dispensing:** Separate speeds for each mode.

The CAPP Tempo Pipette Controller has revolutionary features that separate it from other controllers. Problems of over pipetting and having limited features with your old pipette controllers are gone. The proprietary Electronic Break System (EBS) allows users to pipette at maximum speed without compromising accuracy. The controller allows you to fill 25mL in less than 12 seconds and provides six different speed settings for both aspiration and dispense modes. Additionally, the CAPP Tempo comes with an LED display so you always know the aspiration speed, dispense speed and battery life.

CHEMcell™, Motorized Pipette Filler

The motorized pipette filler features a full volume range of 0.1 to 100mL with easy one-handed operation. Its lightweight, ergonomic design allows longer, fatigue-free pipetting with separate aspirate and dispense speed controls. A large LCD display provides visual confirmation of remaining battery charge and speed settings. The lithium-ion battery offers long runtimes per charge without battery memory problems. The fully autoclavable nosecone housing simplifies disinfecting and decontamination.

Non-Graduated Transfer Pipets

Disposable Transfer Pipets, Bulk Packed, Non-Sterile

Unbreakable, all-in-one pipets eliminate the hazards of broken glass and exposure to infectious materials. Put an end to matching rubber bulbs and glass pipets. Molded from transparent, low density polyethylene; inert to biological fluids and most acids. The low-affinity surface reduces the loss of cells and valuable proteins due to binding. Can be sealed and refrigerated. Temperature resistant from -196° to $+90^{\circ}\text{C}$. Can be used in liquid nitrogen.

Cell Spreaders, Polystyrene, Sterile

- L-shaped spreaders made of polystyrene
- Smooth surface and angled end reduce risk of damaging culture medium
- L-shape allows application on the entire culture dish or plate surface
- 10 per bag (sterile, resealable)
- Gamma radiation sterilized

Polystyrene Cell Spreaders, L-shaped, Sterile

Part No.	Material	Color	Qty.	Price
CGE-1351-001	polystyrene	orange	10	\$4.60 Ω

L-Shaped Cell Spreaders, Polypropylene, Sterile

- Unlike glass spreaders, durable polypropylene L-shaped cell spreaders are non-breakable and pose no safety hazard
- L-Shaped for convenient spreading; just turn the Petri dish for smooth, even sample distribution
- Smooth spreading surface and a slight upward turn reduce the chance that the spreader will dig into agar
- Packaged sterile (gamma irradiated) in individual or bulk, easy-to-open, paper / plastic wrappers
- Pre-sterilization eliminates flaming or autoclaving and reduces risk of contamination

L-shaped cell spreaders are disposable, microbiological spreaders that provide an economical alternative to bending glass rods or pipettes for spreading samples on agar surfaces and filters in Petri dishes.

Round Cover Slips, #1, German Glass

Cover slips are manufactured from the highest quality, borosilicate, hydrolytic, class 1, German glass. They have excellent resistance to chemicals and are ideal for neural tissue culture and hard-to-attach cells. These cover slips are exceptional for fluorescence and confocal microscopy.

Round Cover Slips, Glass, NEST

Cover Glass/Slips for Microscope Slides from NEST Scientific are made from high-quality glass that is non-cytotoxic. Suitable for use with 6-, 12- and 24-well cell culture plates.

- High-quality glass, non-cytotoxic
- Thickness: 0.16 - 0.19 mm
- Manufactured in 100,000 grade clean rooms
- Resistant to organic solvents
- Fully autoclavable
- Can be used in a confocal experiment
- Available in diameters of 14, 15, 18, 20 and 25mm

Microcentrifuge Tubes with Lock Caps, Clear, NEST

- Available non-sterile and sterile
- USP VI grade polypropylene material, free from heavy metal
- RCF: 30,000 x g
- Endotoxin level: <0.1EU, DNase- and RNase-free
- Safe-lock cap design provides secure lid sealing; easy open / easy close
- Temperature range: -80° to +121°

Tubes are autoclavable at 121°C (250°F), under 15psi for 10–15 minutes with drying. Remove from autoclave immediately. Excessive exposure to autoclaving heat may cause warping or decreased structural integrity.

Microcentrifuge Tubes, 1.5mL, Assorted Colors, Sterile

- Polypropylene tubes in blue, red, green, yellow and purple
- Tested up to 28,000xg
- Usable temperature range: -90°C to +121°C
- Sterile, RNase-, DNase- and pyrogen-free

SureSeal S™ microcentrifuge tubes are designed for a broad range of research applications, including enzyme digests, DNA isolation/purification, centrifugation, incubation, and general sample / reagent storage.

Manufactured under clean room conditions, using only BioClear™ co-polymer, an advanced polypropylene that maximizes clarity, centrifugal strength (tested up to 28,000xg) and the usable temperature range (-90°C to +121°C).

The oversized tube cap (with frosted marking surface), combined with the unique ring & groove closure, enhances the security of the liquid-tight seal, while minimizing the required locking forces for a more ergonomic opening / closing of the tube caps. All SureSeal S™ tubes are RNase-, DNase- and pyrogen-free.

Individually Wrapped Centrifuge Tubes, 15 and 50mL, Sterile

- Sterile, RNase-, DNase-, pyrogen- and cytotoxin-free
- Frosted marking surface

Conical 15mL and 50mL centrifuge tubes are made of premium polypropylene for clarity and centrifugal strength. Tubes and caps may be frozen at temperatures as low as -86°C. The maximum centrifugal force is 12,000xg for the 15mL tubes and 15,000xg for the 50mL tubes*. Caps are made of polyethylene and have a flat top surface for easy marking or labeling. Compatible with standard rotors.

*Refers to liquids with a specific gravity of 1.0, using appropriate rotors, cushions and adapters.

Cell Straining Kits, Sterile, ReadyStrain™

ReadyStrain™ includes all the necessary parts for filtration of cell suspensions in a single, pre-assembled, ready-to-use, sterile packet. Kits eliminate the contamination risks associated with opening multiple packages, and assembling separate pieces (i.e. tubes strainers and caps). Individual sterile packets free researchers from having to expose entire bags of 50mL tubes and caps in order to perform one filtration. Instead, they can open a single ReadyStrain Kit directly under the hood.

Each gamma sterilized kit contains a SureStrain™ Strainer pre-attached to a 50mL tube, with a separate screw-cap ready for assembly, processing and storage after the filtration is complete. Kits supplied in easy open "tear-strip" bags.

Centrifuge Tubes in Foam Racks, Rainbow Caps, Sterile

- Colored caps for easy sample identification
- RNase-, DNase- and Pyrogen-Free

Conical 15 and 50mL, polypropylene centrifuge tube with a proven design. Conveniently configured in a foam rack with five different colored caps for easy sample identification. Tubes are perfect for any lab conducting multiple studies or any experiments requiring multiple sample types or solutions. All five cap varieties are flat, brightly colored, and frosted to make them easy to write on. Tubes have large, rectangular, white marking areas.

Made of premium polypropylene, with exceptionally uniform wall thickness for clarity and centrifugal strength. Tubes and caps may be used for sample storage at temperatures as low as -80°C. The maximum centrifugal forces are 12,000xg for the 15mL tubes and 15,000xg for 50mL version.*

Tubes and caps are suitable for stem cell research and certified sterile, RNase-, DNase- and Pyrogen-free.

*Refers to liquids with a specific gravity of 1.0, using appropriate rotors, cushions and adapters.

MacroTube™ Centrifuge Tubes, 5mL, Clear or Black

5mL MacroTubes™ take all of the conveniences of standard 1.5mL tubes and scales them up for larger volumes. Polypropylene tubes come with attached caps that provide tight, leak-proof seals that can also be effortlessly opened and closed with one hand. Caps are designed to provide secure seals from -86°C to +80°C.

CapLock Clips™ are available to maintain the integrity of the seals at extreme temperatures. In incubated / heated applications, they may be “boiled” for up to 10 minutes. At temperatures above 80°C, the use of the CapLock Clips are recommended.

The center of the cap has a special thin “membrane” (non-resalable) area, designed for easy puncture and access by a syringe / needle. Once punctured, the opening can also be useful for venting the internal pressure caused by incubation at moderately high temperatures.

The potential contamination of pipettor shafts is greatly reduced because the 56mm total tube length (vs. 120mm for standard 15mL centrifuge tubes) is short enough for standard 1mL or 5mL tips to reach the tubes conical bottom.

- Dimensions: 16.5 x 54mm (not including rim and cap)
- Maximum Centrifugal Force: 25,000xg
- RNase- and DNase-free

The convenience of smaller tubes in a 5mL size!

Flowtubes for Flow Cytometry Instruments, 12 X 75mm, 5mL

- Compatible with FACS (BD) instruments
- Available with 35µm strainer cap, standard cap, or no cap
- Clear polystyrene
- 5mL capacity

Made of crystal-clear polystyrene, these 12 x 75mm FlowTubes™ are designed for Fluorescence Activated Cell Sorting / flow cytometry equipment including FACS systems from BD Biosciences.

The diameter and wall thickness of the tube's neck is held to very tight tolerances to ensure consistent compatibility with the automated instrument. They are available with the standard two-position culture cap, no cap at all, or with a cap that contains a 35µm nylon mesh screen, designed to assist in cell sorting / straining applications. These tubes are primarily used to collect dissociated sample for subsequent processing in automated flow cytometry instruments.
